

VERNAL DO/BCRA 3809 FIELD INSPECTION REPORT

Date 9/13/95 Time 1:00pm Location: T5S R25E Sec. 9, N $\frac{1}{2}$ NW $\frac{1}{2}$ SW $\frac{1}{2}$

Operator present during inspection? No

(Names and Titles) Alan H. Chew, Claimant/Operator, P.O. Box 126,
Jensen, UT 84035, (801) 789-7758

Notice/Plan on file? Yes/Notice Case file serial number UTU-66378

Is the operation active? Yes Claim Name Flagstone, UMC268644

Description of operations (including access, reclamation, etc.):
Removing rock from the northeast and southwest rim of the draw.
Will progress to the southwest and northwest. Using a rubber tired
front-end loader and wench truck. Hauling each piece of rock about
.75 of a mile to the east on existing roads and loading same on
flatbed semi-truck parked on private ground. As much topsoil as
possible will be stockpiled for redistribution/reseeding later.
Very difficult to estimate the amount of previous disturbance be-
cause the removal area consists primarily of highly jointed and
jumbled bedrock. Probably much less than an acre. No springs,
ponds, or running water in the project area. Little noticeable
disturbance can be seen although Mr. Chew reports that about 30
tons of slab rock was removed from the project area during fiscal
1995. General area is quite clean and the roads are in good shape.
Attached photos show both sides of the gully from which rock is
being removed.

Other Agency Permits: Small Mine Application has been filed with
UDOGM. UDOGM reference number is S/047/061

Is the operation in compliance with the Notice on file or the stip-
ulations of approved Plan? Yes
